## Building Integrated Patient-Centered Medical Homes

JSI has always been committed to the promotion and development of patient-centered integrated approaches to care that consider patients' economic and social circumstances. Consistent with this commitment and now embodied in a nationwide push for patient-centered medical homes (PCMHs), JSI works with primary care provider organizations, including federally qualified health centers (FQHCs), rural health clinics (RHCs), family planning clinics, and county-owned community health centers, to transform their practices into PCMHs and earn associated recognition.

The number of primary care organizations striving for recognition as PCMHs by the Accreditation Association for Ambulatory Health Care (AAAHC), National Committee for Quality Assurance (NCQA), or The Joint Commission (TJC) is increasing rapidly. More recently, leading organizations are pushing to further integrate medical services with state and local public health department-sponsored health promotion and prevention initiatives, developing the concept of an Integrated Patient-Centered Medical Home.

JSI has 35 years of experience working in primary medical care and public health. We bring an exceptional combination of skills to assist primary care organizations to transform their practices into integrated patient-centered medical homes by:

- Developing PCMH transformation teams and processes
- Assessing practices' medical home aspects and conducting a "medical home" gap analysis
- Engaging clinical leadership and creating care teams
- Applying Lean Six Sigma techniques to achieve process redesign and operational excellence
- Building effective chronic care programs
- Building linkages with public health initiatives
- Assisting with the PCMH recognition/accreditation processes
