

MCHIP CONTRIBUTIONS YEARS 1-5

to Global Gains in Maternal, Newborn and Child Health

Globally, maternal and child deaths are significantly decreasing. MCHIP activities contribute to these global reductions in maternal and child deaths, and improve the health of women (from planning a family through pregnancy and delivery) and their children (from infancy through childhood). At the household, community and hospital levels, MCHIP implements and works to scale up high-impact interventions.

MCHIP is working in more than 40 countries worldwide.

MCHIP.NET

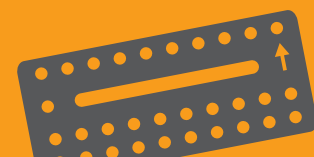

FAMILY PLANNING

30% of maternal deaths could be prevented simply by fulfilling the unmet need for family planning.

12 COUNTRIES introduced PPIUCDs with MCHIP assistance.

Over **3.6 MILLION** women were counseled on family planning as part of integrated essential care services at MCHIP-supported facilities over the last 5 years.

1.8 MILLION couple years of protection to avert pregnancy were supported by MCHIP family planning services.

MATERNAL HEALTH

The major causes of maternal deaths are postpartum hemorrhage (PPH) and pre-eclampsia/eclampsia (PE/E) which together account for more than 40% of maternal mortality.

19 COUNTRIES improved skilled attendance at birth.

15 COUNTRIES introduced PE/E prevention and treatment.

30 COUNTRIES expanded PPH prevention programs.

Over **1.5 MILLION DELIVERIES** were attended by a skilled attendant in MCHIP programs.

Over **953,000** women were provided AMTSL.

NEWBORN HEALTH

Simple interventions can prevent newborn deaths. MCHIP supported...

13 COUNTRIES expanded postnatal care and essential newborn care.

24 COUNTRIES expanded Kangaroo Mother Care.

Helping Babies Breathe resuscitation programs in **25 COUNTRIES**.

Antibiotic treatment for over **309,000 NEWBORNS**.

CHILD HEALTH

Immunization is estimated to prevent the deaths of 2 to 3 million children each year. But another 1.5 million children still die from diseases that could be prevented by vaccination.

MCHIP has provided technical support to strengthen routine immunization programs in **14 COUNTRIES**.

MCHIP has provided technical support to introduce new and underutilized vaccines (Penta, PCV and Rota) in **11 COUNTRIES**.

Over the life of MCHIP, more than...

88 MILLION children received DTP3 (from MCHIP supported immunization programs).

Child pneumonia remains the leading cause of death among children under 5, accounting for 1 in 5 child deaths globally.

6 COUNTRIES expanded implementation of ORT and zinc for treatment of diarrhea.

Through MCHIP-supported programs, over

190,000 cases of child pneumonia were treated with antibiotics.

MCHIP supported the treatment of over

740,000 cases of child diarrhea.

Sustaining these achievements requires improved national policies, training and contributions to global learning

- Across MCHIP countries, USG-supported training programs graduated nearly 282,000* participants.
- Over the life of the project, 155 national policies were drafted with USG support.

*Actual total for life of project is 281,834 total participants (Program Year 1 through Program Year 2 did not count unique individuals).
