

Health Information Technology

Managing Health Information with Technology

JSI is at the forefront of efforts to modernize health care information technology (IT) systems to support public health strategies and goals. In partnership with government agencies at all levels, hospitals, physician groups, community organizations and other health care providers, JSI provides technical expertise to help evaluate, plan, implement, and manage health IT solutions.

- **Needs assessment and strategic planning**
Evaluate the overall needs and objectives of health care organizations and providing short- and long-term recommendations that support capacity building and maximize available technology solutions
- **Review and evaluation**
Work with state and federal agencies to monitor and evaluate government-funded health IT grants and contracts, including evaluating the impact of health IT and synthesizing lessons learned
- **Health information exchange**
Plan and implement public health information exchanges that enable automated information sharing
- **Program registries and data warehouses**
Plan and implement advanced data collection and management systems to streamline patient recordkeeping
- **Data management and reporting**
Integrate data management, analysis, and reporting with health information exchange and data warehouse solutions
- **Training and technical assistance**
Develop and provide educational sessions on various IT topics. JSI provides technical assistance to individuals as well as to larger groups and communities in tandem with provided services
